8 Detailed Description

8.1 Overview

TS3DV642 is a 12-channel 1:2 or 2:1 bidirectional multiplexer/demultiplexer. The TS3DV642 operates from a 2.6 to 4.5 V supply, making it suitable for battery-powered applications. It offers low and flat on-state resistance as well as low I/O capacitance which allows it to achieve a typical bandwidth of up to 7.5 GHz. The device provides the high bandwidth necessary for HDMI and DisplayPort applications.

8.2 Functional Block Diagram

8.3 Feature Description

The TS3DV642 is based on proprietary TI technology which uses FET switches driven by a high-voltage generated from an integrated charge-pump to achieve a low on-state resistance. TS3DV642 has 12-channel bidirectional switches with a high bandwidth (~ 7.5 GHz). TS3DV642 uses an extremely low power technology and uses only 50 μA I_{CC} in active mode. The device has integrated ESD that can support up to 2-kV Human-Body Model (HBM) and 1-kV Charge Device Model (CDM). TS3DV642 is offered in a 42-pin QFN package (9 mm x 3.5 mm) with 0.5 mm pitch. The device can support analog I/O signal in 0 to 5 V range. TS3DV642 also has a special feature that prevents the device from back-powering when the V_{CC} supply is not available and an analog signal is applied on the I/O pin. In this situation this special feature prevents leakage current in the device. The TS3DV642 is not designed for passing signals with negative swings; the high-speed signals need to be properly DC biased (usually ~1 V) before being passed to the TS3DV642. The differential S21 characteristics as a function of frequency for Port A and Port B are shown in [Figure 1](#) and [Figure 2](#), respectively. The figures show a differential bandwidth of 6.7 GHz and 7.7 GHz for Port A and Port B, respectively. The cross-talk (XTALK) characteristics as a function of frequency are shown in [Figure 3](#) and [Figure 4](#), respectively. The off-state isolation (OISO) characteristics for Port A and Port B are shown in [Figure 5](#) and [Figure 6](#), respectively. The return loss

characteristics (S11) are shown in Figure 7. The eye pattern and Time Interval Error (TIE) histogram at 3.4 Gbps (for HDMI 1.4 applications) with TS3DV642 in path for Port A is shown in Figure 10. The eye pattern and Time Interval Error (TIE) histogram at 3.4 Gbps through path (no TS3DV642) for Port A is shown in Figure 11. The eye pattern and Time Interval Error (TIE) histogram at 3.4 Gbps (for HDMI 1.4 applications) with TS3DV642 in path for Port B is shown in Figure 12. The eye pattern and Time Interval Error (TIE) histogram at 3.4 Gbps through path (no TS3DV642) for Port A is shown in Figure 13. The eye pattern at 6.0 Gbps (for HDMI 2.0 applications) with TS3DV642 in path for Port A is shown in Figure 8. The eye pattern at 6.0 Gbps (for HDMI 2.0 applications) through path (no TS3DV642) for Port A is shown in Figure 9. Note that the eye patterns are measured with only one channel on at a time.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

TS3DV642 can be used for two typical DisplayPort applications. Figure 21 describes a DisplayPort (DP) application where TS3DV642 is used to switch between two different graphic & memory controllers on a single DP connector. Figure 24 shows a docking application where TS3DV642 is used to switch signals from a single graphic and memory controller to a display port and docking station connector. Note that the TS3DV642 is not designed for passing signals with negative swings; the high-speed signals need to be properly DC biased (usually ~1 V from the graphic controller side) before being passed to the TS3DV642.

AUX Pull-up / Pull-down resistors	10 kΩ to 100 kΩ
Pull-up / Pull-down resistors for SEL1 / SEL2 pins	10 kΩ

9.2.1.2 Detailed Design Procedure

The TS3DV642 is designed to operate with 2.6 V – 4.5 V power supply. The wide power supply range allows flexibility for battery powered applications. If a higher power supply is used in the system, a voltage regulator can be used to bring down the voltage to 2.6 V – 4.5 V range. Decoupling capacitors may be used to reduce noise and improve power supply integrity. AC coupling capacitors in 75 nF – 200 nF range must be placed on the MainLink (ML) and AUX lanes. In this particular application the AC coupling capacitors are shown on the connector side. The AC coupling capacitors may also be placed on the signal path on controller side. The AUX+ line must be pulled-down weakly through a resistor to ground and the AUX– line must be pulled-up weakly through a resistor to VCC.

9.2.3.1 Design Requirements

Table 4. Design Parameters for HDMI Application

Design parameter	Example value
V _{CC}	2.6 V to 4.5 V
VCC decoupling capacitor	0.1 µF
DDC Pull-up resistors	2 kΩ to 5 V
Pull-up / Pull-down resistors for SEL1 / SEL2 pins	10 kΩ
HPD Pull-down resistor	100 kΩ

9.2.3.2 Detailed Design Procedure

The TS3DV642 is designed to operate with 2.6 V – 4.5 V power supply. The wide power supply range allows flexibility for battery powered applications. If a higher power supply is used in the system, a voltage regulator can be used to bring down the voltage to 2.6 V – 4.5 V range. Decoupling capacitors may be used to reduce noise and improve power supply integrity. Pull-up resistors to 5 V must be placed on the source side DDC clock and data lines according to the HDMI standard. A weak pull-down resistor must be placed on the source side HPD line.

9.2.3.3 Application Curves

Figure 29. Eye Pattern: 6 Gbps, No Device Through Path (Only One Channel Measured at a Time)

10 Power Supply Recommendations

V_{CC} should be in the range of 2.6 V to 4.5 V. Voltage levels above those listed in the Absolute Ratings table should not be used. Decoupling capacitors may be used to reduce noise and improve power supply integrity. There are no power sequence requirements for the TS3DV642.

11 Layout

11.1 Layout Guidelines

To ensure reliability of the device, the following commonly used printed-circuit board layout guidelines are recommended:

- Decoupling capacitors should be used between power supply pin and ground pin to ensure low impedance to reduce noise. To achieve a low impedance over a wide frequency range use capacitors with a high self-resonance frequency.
- ESD and EMI protection devices (if used) should be placed as close as possible to the connector.
- Short trace lengths should be used to avoid excessive loading.
- To minimize the effects of crosstalk on adjacent traces, keep the traces at least two times the trace width apart.
- Separate high-speed signals from low-speed signals and digital from analog signals.
- Avoid right-angle bends in a trace and try to route them at least with two 45° corners.
- The high-speed differential signal traces should be routed parallel to each other as much as possible. The traces are recommended to be symmetrical.
- A solid ground plane should be placed next to the high-speed signal layer. This also provides an excellent low-inductance path for the return current flow.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.
