

120/150V系列 N-沟道 JSFET® 提供更多余量及灵活性

120/150V-series JSFET® Offers More Headroom & Flexibility in Applications like Fast Chargers & PoE

120/150V JSFET® SGT MOSFET 在漏源极耐压上提供更多的余量，因而在功率要求日渐增加的应用上更具灵活性。在 AC/DC 电源适配器和快充充电器里的同步整流、mini/LED 背光里的 DC/DC 升压等应用中，高 V_{DS_Max} 能有效的保证器件在更大的杂散尖峰电压下仍然可靠运行，并且适应不同的系统要求。

The 120/150V-series JSFET® offers more headroom in V_{DS_Max} hence they easily accommodate the increasing demand for higher power in the end systems. In applications like synchronized rectification & DC/DC boost in AC/DC power adapter & mini/LED backlighting, the higher V_{DS_Max} enable reliable operation against larger spurious spikes and be adaptive to different system implementation.

在栅极电荷 (5.3 ~ 68 nC) 和米勒电容 (3.8 ~ 8.3 pF) 不受影响的情况下，单元间距和导通电阻 (5.2 ~ 54 mΩ) 等关键参数被极大的优化。突出的成本性能比，结合低断面的表面贴片式封装 PDFN3x3 / 5x6，该系列产品在 AC/DC 电源适配器、mini/LED 背光、光伏微型逆变器终端市场广受欢迎。

Key parameters like cell-pitch, turn-ON resistance (5.2 ~ 54 mΩ) are optimized without the gate charge (5.3 ~ 68 nC) & miller capacitance (3.8 ~ 8.3 pF) being compromised. Together with the low-profile SM packages like PDFN3x3 / 5x6, the exceptional cost-vs-performance resulted make these devices well received in the target markets.

为使硅晶的优异能效完全展现，采用了一系列具高热效能及优秀工业设计的封装。其中包括直插式封装 (TO220 / 251) 及表面贴片式封装 (PDFN3x3 / 5x6、TO252 / 263、SOP8)。所有 120/150V SGT MOSFETs 无卤素，且符合RoHS标准。

Wide range of thermally efficient packages with excellent industrial design are offered. These include the surface-mounted (SM) type PDFN3x3 / 5x6, TO252 / 263, SOP-8; and the through-hole (TH) type TO220. All devices shipped are halogen-free & RoHS-compliant.

Key Aspects of 120/150V-series JSFET®

- **Small $R_{ON,sp}$ Leading to Very Competitive FOM**
Exceptional $R_{ON,sp}$ result in very competitive figure-of-merit (FOM) at 196 for the 120V device and at 276 for the 150V device, all achieved in the innovative PDFN5x6 package.
- **Low Q_g & $V_{GS(th)}$ Reduce Switching Loss**
With $V_{GS(th)_Typ}$ at ~3V and Q_{g_Typ} as low as 5.3nC, these 120V & 150V devices offer outstanding switching efficiency – key to applications like mini/LED backlighting in LCM & SR in AC/DC.
- **Unclamped Inductive Switching Tested**
Fully UIS tested during production to confirm the device's ability to withstand the avalanche energy common in both the resistive and inductive type of loads.
- **Thermally Efficient & Diverse Packages**
SM type packages like the PDFN3x3 / 5x6 and TO252 / 263, TH type packages like the TO220 are tuned to minimize thermal resistance and stray inductance.

Market Applications

- DC/DC boost for mini/LED backlighting in of PC monitors and 4K/8K large screen TVs
直流升压 mini/LED 背光：电竞显示器、4K/8K QD/LCD 平面电视
- Synchronous rectification (SR) in fast chargers & power adapters for PSE (power sourcing equipment) of PoE++
AC/DC 副边同步 MOSFET (中压) 开关：快充充电器、PSE (PoE++) 电源适配器
- DC/DC in micro-inverter or LV power optimizer for solar energy
微型逆变器/功率优化器 直流电源管理：光伏再生能源
- Half-bridge inverter for motor driving in power tools, commercial unmanned ariel vehicles (UAV), e-bike
半桥逆变器：电动工具、商用无人机、电动车
- Power switching for isolated DC/DC conversion in 4G/5G telecommunications, Industry 4.0 automation, battery management system (BMS) of e-bike
隔离 DC/DC 电源切换：4G/5G 通信设备、工业 4.0 自动化、电动车 BMS

Application Circuits

These 120/150V devices are well suited for miniLED backlighting which has become prevalent in the 4K/8K display panels with spectacular contrast ratio and colour accuracy. The low Q_g @ 5.3 nC and C_{iss} @ 306 pF enable hard switching which can minimize switching loss. The low-profile PDFN3x3 package also makes it easy for the large screen 4K/8K FDTV to stay thin while the diagonal length is at 98" or larger. Compared to the more common SR MOSFET at $V_{DS_Max} = 100V$, the 120/150V devices can easily accommodate spurious spikes of higher magnitude existed in the secondary-side of an AC/DC power adapters or SMPS for the PSE in a typical 90W+ PoE++ and the USB Power Delivery 3.1 applications.
