

Features

- Gain-bandwidth Product: 10 MHz
- Low Noise: 8.2 nV/ $\sqrt{\text{Hz}}$ (f= 1 kHz)
- Slew Rate: 7 V/ μs
- Offset Voltage: 1 mV (max)
- EMIRR IN+: 88 dB(under 2.4 GHz)
- Low THD+N: 0.0005%
- Supply Range: 2.2 V to 5.5 V
- Supply Current: 1.4 mA/ch
- Low Input Bias Current: 0.3 pA Typical
- Rail-to-Rail I/O
- High Output Current: 70 mA (1.0 V Drop)

Applications

- Sensor Signal Conditioning
- Consumer Audio
- Multi-Pole Active Filters
- Control-Loop Amplifiers
- Communications
- Security
- Scanners

Description

The TP2411, TP2412, and TP2414 are low-cost, single, dual, and quad rail-to-rail output, single-supply amplifiers featuring low offset and input voltages, low-current noise, and wide signal bandwidth. The combination of low offset, low noise, very low input bias currents, and high speed make these amplifiers useful in a wide variety of applications. Filters, integrators, photodiode amplifiers, and high impedance sensors all benefit from this combination of performance features. Audio and other ac applications benefit from the wide bandwidth and low distortion of these devices.

Applications for these amplifiers include power amplifier (PA) controls, laser diode control loops, portable and loop-powered instrumentation, audio amplification for portable devices, and ASIC input and output amplifiers.

The TP2411 is the single-channel version available in 8-pin SOP and 5-pin SOT23 packages. The TP2412 is the dual-channel version available in 8-pin SOP, SOT, TSSOP, and MSOP packages. The TP2414 is the quad-channel version available in 14-pin SOP and TSSOP packages.

Typical Application Circuit

$$V_{OUT} = (I_{LOAD} \times R_{SHUNT}) \times (R_2 / R_1) + V_{REF}$$

When $R_3 = R_1$, $R_2 = R_4$, $R_{SHUNT} \ll R_1$

Specifications

Absolute Maximum Ratings⁽¹⁾

Parameter		Min	Max	Unit
	Supply Voltage: $V^+ - V^-$ ⁽²⁾		7	V
	Input Voltage	$V^- - 0.3$	$V^+ + 0.3$	V
	Input Current: $+I_{IN}$, $-I_{IN}$ ⁽³⁾	-20	+20	mA
	Output Short-Circuit Duration ⁽⁴⁾		Indefinite	
	Current at Supply Pins	-60	+60	mA
T_J	Maximum Junction Temperature		150	°C
T_A	Operating Temperature Range	-40	125	°C
T_{STG}	Storage Temperature Range	-65	150	°C
T_L	Lead Temperature (Soldering 10 sec)		260	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

(2) The op amp supplies must be established simultaneously, with, or before, the application of any input signals.

(3) The inputs and outputs are protected by ESD protection diodes to the negative power supply. If the input or output extends more than 500 mV beyond the negative power supply, the current should be limited to less than 10 mA.

(4) A heat sink may be required to keep the junction temperature below the absolute maximum. This depends on the power supply voltage and how many comparators are shorted. Thermal resistance varies with the amount of PC board metal connected to the package. The specified values are for short traces connected to the leads.

ESD, Electrostatic Discharge Protection

Symbol	Parameter	Condition	Minimum Level	Unit
HBM	Human Body Model ESD	ANSI/ESDA/JEDEC JS-001	4	kV
CDM	Charged Device Model ESD	ANSI/ESDA/JEDEC JS-002	1	kV

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

Thermal Information

Detailed Description

Overview

The TP2411 series op amps can operate on a single-supply voltage (2.2 V to 5.5 V), or a split-supply voltage (± 1.1 V to ± 2.75 V), making them highly versatile and easy to use. The power-supply pins should have local bypass ceramic capacitors (typically 0.001 μ F to 0.1 μ F). These amplifiers are fully specified from +2.2 V to +5.5 V and over the extended temperature range of -40°C to $+125^{\circ}\text{C}$. Parameters that can exhibit variance with regard to operating voltage or temperature are presented in the Typical Characteristics.

Functional Block Diagram

Figure 21. Functional Block Diagram

Application and Implementation

NOTE

Information in the following applications sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

Low Side Current Sensing Application

Figure 22 shows the TP241X configured in a low-side current sensing application. The low-side current sensing method consists of placing a sense resistor between the load and the circuit ground. The voltage dropping across the resistor is amplified by different amplifier circuits with TP241X. The V_{REF} can be used to add bias voltage to output voltage. Particular attention must be paid to the matching and precision of R1, R2, R3, and R4, to maximize the accuracy of the measurement.

$$V_{OUT} = (I_{LOAD} \times R_{SHUNT}) \times (R2 / R1) + V_{REF}$$

$$\text{When } R3 = R1, R2 = R4, R_{SHUNT} \ll R1$$

Figure 22 Dual Supply Operation Connections

Power Supply Recommendations

Place 0.1-μF bypass capacitors close to the power supply pins for reducing coupling errors from the noisy or high impedance power supplies.
